

"The Infinity® Difference"

Guaranteed Fit

Infinity® is guaranteed to fit into your floor system- **Eliminate the frustrations associated with finding replacement tiles or having something modified or custom built.** Guarantee applies to purchases made from Infinity® authorized dealers and who have confirmed its appropriate application on Infinity's Cross Application Guide as illustrated on this website.

Guaranteed Availability

Infinity® is guaranteed to be in stock ready for immediate shipment- **Increase the air cooling to your COLD aisles today!** Guarantee applies to standard Infinity® model # ISG55-15-WW purchased from an authorized Infinity distributor (large quantities may be limited and vary from location to location).

Universal Adaptability

Infinity® is the only air grate that offers high performance air cooling and adapts into both wood core and steel panel type floor systems WITHOUT TOOLS or COSTLY MODIFICATIONS. **This can significantly reduce the high cost of skilled labor when multiple systems are used within the same facility-** Infinity's "Z-Plate" (patent pending) attaches to underside of each corner and installs in seconds.

Quad Damper Design (patent pending)

The unique design of this Quad Damper allows it to be "factory installed" and is **GUARANTEED** against damage during shipment. However, should you choose to "field install" it's easy with Infinity®- damper section modules "snap-in place" and install in seconds. **The Quad Damper can provide significant savings when compared to ordinary "slide dampers" that are prone to damage during shipment and typically require tools and/ or skilled labor to install.**

Quad Damper (Precise Air Control)

Customers tell us that the Quad Damper provides a great advantage over the ordinary slide damper because of its "multiple" open (25%, 50%, 75%) positions, and ability to shut down air flow complete for future use- contributing to more effective static pressure balance and controlled cooling to high density server racks. Position of (4) damper section modules are easily adjusted from above floor, while grate is in operation.
